

BOB SOSAMPHANXAY

Cybersecurity | Application Security | Secure Software Development

Email: thvasawinter@gmail.com | github.com/bobsspx | Phone: 02058737898

PROFESSIONAL SUMMARY

Fourth-year developer focused on cybersecurity, application security, and secure software development. Hands-on experience building security-focused web applications with RBAC, server-side authorization, secure sessions, audit logging, rate limiting, PostgreSQL, and security testing. Seeking a junior role where secure software engineering and practical security controls are core responsibilities.

TECHNICAL SKILLS

Security: RBAC, authentication security, server-side authorization, session revocation, audit logging, rate limiting, input validation, secure HTTP headers, OWASP-oriented API hardening

Development: TypeScript, JavaScript, React, Next.js, Python, FastAPI, PostgreSQL, SQL, Java, C#

Tools & Platforms: Git, GitHub, Docker, Vercel, Neon PostgreSQL, Vitest, Windows

SELECTED PROJECTS

SecureFactory - Secure Industrial Operations Dashboard | Next.js, TypeScript, PostgreSQL, Neon, Vercel, Vitest

- Built a security-focused industrial operations dashboard with role-based access control for Admin, Operator, and Viewer roles, enforced at the API layer.
- Implemented encrypted session handling, session revocation/versioning, persistent HMAC-based login rate limiting, bcrypt password hashing, audit logging, masked security-event data, and secure HTTP headers.
- Added PostgreSQL-backed production records and dashboard metrics, permission-boundary testing with 401/403 responses, and production deployment on Vercel.

Live: securefactory-demo.vercel.app | **GitHub:** github.com/bobsspx/securefactory-demo

BankGuard AI - Banking Fraud & Cybersecurity Platform | Next.js, FastAPI, PostgreSQL, Python, scikit-learn, Docker

- Developing a university final-project platform for banking fraud and cybersecurity operations, combining transaction monitoring, explainable risk rules, anomaly detection, alerts, and investigation workflows.
- Designed secure architecture with authentication, RBAC, server-side authorization, structured audit logging, rate limiting, secure secrets handling, and API hardening using synthetic banking data.

EDUCATION

[University Name] - [Degree / Major] | Expected 2027

Fourth-year student

Portfolio CV - replace bracketed placeholders before sending to employers.
